

ZOLL VENTILATION SOLUTIONS

Providing safety and precision for respiratory patients

To support your patients throughout the continuum of care, you depend on products that advance emergency care. ZOLL® technologies provide the support you need, with ventilation solutions that are suitable for all types of care providers to treat a wide range of respiratory calls.

PROPAQ® M AND MD WITH REAL BVM HELP®

When you first arrive on the scene, preoxygenation provides a safety buffer and keeps a patient's SpO₂ above 90%, giving you time to assess and treat.¹

Real BVM Help on the Propaq MD monitor/defibrillator provides clinicians with real-time ventilation feedback on both rate and volume for patients managed with a bag valve mask (BVM) device or an advanced airway. Clinicians can view target and delivered tidal volume and rate directly on the monitor. Real BVM Help works with any standard-sized commercially available airway management device for both intubated and non-intubated patients.

EMV+® TRANSPORT VENTILATOR

Once you have assessed and preoxygenated the patient, it is imperative to continue to maintain the patient's airway and SpO₂ level during transport to the hospital.

EMV+'s Touch, Turn, Confirm interface allows the provider to easily manage and regulate the patient's PEEP, while titrating FiO₂ to keep the patient's SpO₂ above 90% in invasive or non-invasive modes. Smart Help™ technology guides users through simple on-screen prompts to quickly resolve alarms if the patient's SpO₂ level falls outside the preset range. EMV+'s internal compressor consumes less than half of the oxygen of many transport ventilators, making it ideal for prolonged transports.²

ZOLL®

PROPAQ M AND MD WITH REAL BVM HELP ADVANCE YOUR CARE

Propaq M and MD takes the guesswork out of decision-making. Manage your patients more effectively with groundbreaking new features, Real BVM Help, TBI Dashboard™, and RescueNet® Live.
